

Security Delivered

Introducing the NEW 2GIG EDGE Security and Automation Panel that sets a new benchmark in form and function. With Twin Lakes Security, you'll have peace of mind knowing your home is protected when you're not there. Not only can we monitor security, fire, and water but you will also receive alerts through the Alarm.com app. No matter what's happening, you'll know.

- **Screen** – 7.5” touchscreen and photo capture
- **Touchless Convenience** – Face recognition and Bluetooth capabilities
- **Smart Home Capable** – Customize controls, rules, scenes and notifications
- **Live Video** – View up to 8 camera feeds from the panel screen
- **Extra Security** – Built-in camera, glass break sensor, and emergency alerts
- **Doorbell Convenience** – 2-way audio and door unlock

FRS Community Grant Application

Innovate and move our communities and schools forward with technology. As part of its ongoing commitment to rural communities across the country, the Foundation for Rural Service (FRS) provides annual grants for communities served by NTCA members, such as Twin Lakes. The goal of this program is to support local efforts to build and sustain a high quality of life in rural America. Grants can range from \$250 to \$5,000 that go back in to rural communities. Grant projects vary but are concentrated in four major areas including business, community and economic development, education, and applications of telecommunications.

Why Upload Speed Matters

The future of the internet is sharing—from capturing Instagram-worthy meals to enjoying video chats with friends—and Twin Lakes' upload speeds make that future a reality.

1) Video chat and live sharing

Skype, FaceTime, and other video messaging services all require robust upstream connections to ensure clear audiovisual quality and to prevent freezing and blackouts. Sharing big news on Facebook or Instagram Live also works better with greater upload speed.

2) Working from home or virtual learning

You need a robust upstream connection to interact with colleagues during video conferences, collaborate on team projects, and share important files.

3) Keeping family and friends in the loop

Upload videos to YouTube or share photographs on Facebook faster with a better upstream connection.

4) Faster data backups and online file syncing

If you back up your data, you need upload speed to ensure your data is protected quickly and without glitches. File and photo syncing services like Dropbox, Google Photos, and Microsoft OneDrive all require a minimum of 5 Mbps upload speed to operate properly.

5) Online gaming, remote security and much more...

From online gaming to connected security systems that send real-time images through an internet connection, a fast upload connection is key to ensuring all your interactive online activities function well.

Visit us online at twinlakes.net to get the speed you need.

Summer BUCKET LIST

- ☐ Homemade Ice Cream
- ☐ Picnic at the Park
- ☐ Water Park
- ☐ Drive-in Movie
- ☐ Water Balloon Fight
